11.1.1 SUM OF DIGIT OF NUMBER

ALGORITHM

1. Start
2. Input num
3. Set temp = num, digit_sum = 0
4. While temp > 0:
   digit = temp % 10
   digit_sum = digit_sum + digit
   temp = temp // 10

5. Print digit_sum
6. End

11.1.1. Sum of Digits of a Number
02:43
Write a Python program that reads an integer, calculates the sum of its digits, and prints the result.
Input Format:
• The program reads an integer input with the prompt "Enter a number: "
Output Format:
• Print the sum of the digits in the format:
Sum of digits: <digit_sum>
Note:
• Some base code was provided (input and print statements). The task was to complete the missing logic.

11.1.2 SUM OF DIGIT USING RECURSION

ALGORITHM

Step 1: Start
Step 2: Input integer `n`
Step 3: Check if `n == 0` If yes → return `0`
Step 4: Otherwise
Compute `(n % 10)` → last digit
Compute `sum_of_digits_recursive(n // 10)` → recursive call
Step 5: Return `(n % 10) + sum_of_digits_recursive(n // 10)`
Step 6: Print result
Step 7: End

11.1.2. Sum of Digits using Recursion
06:36
Write a recursive function sum_of_digits_recursive(n) that calculates the sum of the digits of a given non-negative integer n.
Input Format:
• The input consists of a single non-negative integer n.
Output Format:
• The output should be the sum of the digits of the non-negative integer n.
Constraints:
• $0 \leq n \leq 10^9$
